

## Ultra-Clear Glass

Ordinary glass is green with envy.

**Safety and Security Glazings**  
*Starphire* Ultra-Clear Glass by PPG provides an entirely new level of visual quality to safety and security glazing applications. These design challenges are typically addressed by using multi-layer laminates. Whether it's zoo enclosures or jewelry storefronts, marine aquariums or museum cases, viewing through *Starphire* glazings will bring unparalleled color transmission and clarity. Objects are seen in their true colors; they are not distorted by the "greening" that occurs through multi-layer laminates of ordinary clear glass.

*Starphire* safety and security glass is "clearly" remarkable:

- 16% higher Visible Light Transmittance than ordinary clear glass in a 1 3/8-inch laminated glass construction
- Maintains clarity in any thickness
- Security with color fidelity
- Viewed objects sparkle with true color impact
- Easily fabricated to required specifications

The unprecedented radiance and incomparable clarity of *Starphire* provide an unmatched combination of security and visibility.

*Starphire* glass is available in thicknesses from 2.5 mm to 19 mm and is stocked regionally to assure consistent supply reliability. For *Starphire* samples or a list of distributors, contact our Solutions Hotline at 1-888-PPG-IDEA, or visit [www.ppgstarphire.com](http://www.ppgstarphire.com). All PPG architectural glass is Cradle to Cradle Certified.<sup>CM</sup>

Note: *Starphire* glass edge color can vary depending on final glass size, glass thickness, and ambient lighting conditions. PPG recommends a full-size *Starphire* glass viewing to determine acceptability for final use.
