

Heavy Krystal Glacier™

Frequently chosen for its decorative value alone, patterned glass can provide privacy while allowing light to create accents to a setting.

Heavy Krystal Glacier™ from AGC Flat Glass offers a stylish pattern inspired by the frozen tundra—along with the outstanding strength and design flexibility of heavy glass.

AGC Flat Glass designed its Heavy Krystal Glacier rolled patterned product to recall the icy beauty of the frozen tundra, with flowing ripples that exude a sense of calm and well-being. But this product's lovely appearance masks the strength and durability of heavy glass, manufactured by AGC to withstand a range of demanding commercial, residential, and specialty applications. Offered in 1/4" and 3/8" thicknesses, AGC's Heavy Krystal Glacier is perfect for commercial storefronts and partitions, residential shower enclosures, and specialty furniture applications—as well as a broad spectrum of other uses. With its low iron content, this heavy patterned product lacks the green edges associated with traditional heavy glasses—for a remarkable, unmatched appearance.
