

**Frequently chosen for its decorative value alone, patterned glass can provide privacy while allowing light to create accents to a setting.**

## Heavy Krystal Rain™

Looking for heavy patterned glass that features the colorless appearance of a low-iron substrate? Look no further than Heavy Krystal Rain™ from AGC Flat Glass.

Green is a color that is never in fashion—at least where glass edges are concerned. But the high iron content of most heavy glasses has traditionally caused a green edge that interferes with the beauty of heavy patterned products. AGC's innovative line of Heavy Krystal patterned solutions—including Heavy Krystal Rain—has made green edges a thing of the past, with a unique glass composition that provides the upscale appearance of a low-iron substrate. A heavier version of one of AGC's most popular rolled patterned solutions, Heavy Krystal Rain features a lovely rippled effect that recalls a summer rain shower. Heavy Krystal Rain is a natural choice for a spectrum of product applications.
