

Heavy Krystal Textured Flutex™

Green edges are a thing of the past, thanks to AGC's Heavy Krystal Textured Flutex™—offering the strength of heavy glass, the clarity of a low-iron product, and a distinctly beautiful linear pattern.

AGC Flat Glass is changing the face of heavy patterned glass with its Heavy Krystal product family—including Heavy Krystal Textured Flutex. This groundbreaking product combines a heavy glass thickness with a low iron content. The result? A beautiful, durable solution that lacks the green edge associated with thicker glass, but still delivers the practical benefits of a heavy float product. Offered in thicknesses of 1/4" and 3/8", Heavy Krystal Textured Flutex is an ideal choice for many commercial, residential, and specialty applications. Its subtle texture and classic linear design make Heavy Textured Krystal Flutex a smart choice for architects, builders, manufacturers, and designers.

Frequently chosen for its decorative value alone, patterned glass can provide privacy while allowing light to create accents to a setting.
