

Heavy Krystal Serenity™

With a subtle texture that adds new dimension to everyday objects, AGC's Heavy Krystal Serenity™ combines the fragile beauty of patterned glass with the strength of a heavy float product.

AGC's revolutionary Heavy Krystal Serenity offers customers the best of both worlds—the delicate beauty of a patterned glass product, matched by the rugged strength of heavy float glass. This rolled product also offers another distinct advantage: its low iron content eliminates the green edge typically associated with heavy glass. The result is a durable, attractive patterned solution perfect for a range of commercial, residential, and specialty applications. To ensure access to Heavy Krystal Serenity, AGC Flat Glass has created an exclusive Pattern Masters partnership that guides customers to those fabricators and distributors qualified to cut, drill, edge, and polish Heavy Krystal products. This ensures outstanding quality and availability for Heavy Krystal Serenity and other members of this innovative product family.

Frequently chosen for its decorative value alone, patterned glass can provide privacy while allowing light to create accents to a setting.
