

Heavy Krystal Storm™

AGC Flat Glass is proud to offer Heavy Krystal Storm™—a patterned product that combines the strength of heavy glass with the beauty and clarity of a low-iron composition.

AGC is revolutionizing heavy patterned glass with its Heavy Krystal Storm solution, which eliminates the green edges traditionally associated with thicker glass products. With a low-iron composition, Heavy Krystal Storm offers outstanding glass clarity—as well as a lovely pattern that simulates the effect of streaming rain. This AGC product adds strength and beauty to a broad spectrum of commercial, residential, and specialty applications—from shelves to shower doors. And AGC's exclusive Pattern Masters network of fabricators and distributors makes it easy to find a partner certified to cut, drill, edge, and temper Heavy Krystal Storm, as well as other heavy patterned products from AGC Flat Glass.

Frequently chosen for its decorative value alone, patterned glass can provide privacy while allowing light to create accents to a setting.
