Architectural Glass

# Sometimes “clear enough” isn’t good enough.

There’s a time and place for ordinary “clear” and low-iron glasses. But for design-sensitive projects and interior features, you need more than ordinary. You need less green. You need *Starphire Ultra-Clear®* glass.

## Less Green Than the Others

Compare to ORDINARY  
CLEAR GLASS

**87% less green**

Compare to ORDINARY  
LOW-IRON GLASS

**55-60%  
less green**

## More Pure Than the Others

JEWEL-LIKE EDGE  
at lengths of

**130 inches**

ULTIMATE SURFACE CLARITY  
at thicknesses up to

**19mm**

## De-Green Your Glass

“Clear” glass is hardly clear — you don’t have to look closely to see an undesirable green hue. Even ordinary low-iron glass has visible levels of green.

So, what makes *Starphire®* glass special? Consistent, stable aesthetics with less green than any alternative — even in heavy thicknesses and large sizes.

### Always Pure Edge Color

As ordinary glass gets longer, such as in partitions and railings, the edge color gets darker. Only *Starphire®* glass maintains a bright, azure blue edge even at lengths up to 130 inches.

### A Consistently Clear Surface

As ordinary glass gets thicker, so does the intensity of the green hue on its surface. Only *Starphire®* glass maintains its surface clarity at thicknesses up to 19mm.

### Continuous Refinement for 30 Years

Since 1990, *Starphire®* glass has been imitated often, but never replicated. Only Vitro Architectural Glass has consistently refined its proprietary low-iron formula to ensure a product that remains timeless and distinct from other low-iron glasses — on a chemical level.

**For special projects, accept no substitutes.**

## Elevated Design Opportunities

Consider upgrading to *Starphire®* glass for interior or exterior projects.

- Decorative & Acid-Etched Glass
- Stairs & Handrails
- Kitchens & Backsplashes
- Doors & Partitions
- Shower & Bath Enclosures
- Skylights
